

Food Security in California

Percentage of Children Ages 0-17 Living in Food Insecure Households

Definition: Estimated percentage of children ages 0-17 living in households unable to provide adequate food for all household members for the entire year due to insufficient resources (e.g., in 2023, 16.9% of California children lived in food insecure households).

Data Source: Feeding America, [Map the Meal Gap](#) (Nov. 2025).

Percentage of Children Ages 0-17 Living in Food Insecure Households: 2023

Locations	Percent
United States	19.2%
California	16.9%
Alameda County	12.2%
Contra Costa County	12.6%
Fresno County	21.8%
Kern County	21.7%
Los Angeles County	18.4%
Orange County	12.9%
Riverside County	14.7%
Sacramento County	18.6%
San Bernardino County	17.3%
San Diego County	14.5%
Santa Clara County	8.4%

Number of Children Ages 0-17 Participating in CalFresh

What It Is

Kidsdata.org provides the following indicators related to food security:

- The estimated number and percentage of children ages 0-17 living in food insecure households (i.e., households unable to provide adequate food for all household members for the entire year due to insufficient resources)
- The number of children ages 0-17 participating in CalFresh—California's implementation of the federal SNAP (Supplemental Nutrition Assistance Program) or Food Stamps Program—in the month of July; the number of total CalFresh participants (children and adults) also is available
- The number of families redeeming Women, Infants, and Children (WIC) food vouchers for perinatal women and/or children ages 0-5 in the month of January; for years 2019 and earlier, these data are available by type of WIC participant

Why This Topic Is Important

In California and the U.S., more than 1 in 6 children live in households without the resources for consistent, dependable access to enough food for all household members to enjoy active, healthy lives. Uncertain access to food can cause stress for families and disrupt children's ability to concentrate and engage fully in school, social, and physical activities. Compared with food-secure children, children experiencing food insecurity are at higher risk for a host of health problems—with potentially lifelong impacts—including developmental, behavioral, and mental health issues, as well as acute and chronic medical conditions. Food insecurity in children also is linked to higher rates of hospital and emergency room visits and lower academic performance. Among pregnant women, food insecurity is associated with negative physical and mental health outcomes, as well as pregnancy complications.

Food insecurity disproportionately affects households with children (particularly young children under age 6) or adults with disabilities, households with incomes below 185% of the federal poverty threshold, single-parent families, households of color, and children living with foreign-born or limited English-speaking parents. Rural areas and urban centers also tend to have higher food insecurity rates than

Definition: Number of children ages 0-17 receiving CalFresh benefits in the month of July (e.g., in July 2024, 1,923,491 California children participated in CalFresh).

suburbs.

Food assistance programs, such as school meals, the Supplemental Nutrition Assistance Program (SNAP, or CalFresh in California), and the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) provide a safety net to help ensure that low-income children, expectant mothers, and families get adequate nutrition. These programs have been shown to alleviate poverty, reduce adverse maternal and birth outcomes, and improve children's health in general.

How Children Are Faring

According to 2023 estimates, more than 1.4 million California children ages 0-17 lived in a food insecure household—one without the money or other resources to provide enough food for everyone in the household. This translates to more than 1 in 6 children statewide, up from around 1 in 8 in 2020. At the county level, the proportion of children experiencing household food insecurity in 2023 ranged from fewer than 1 in 12 (Marin, San Mateo) to more than 1 in 4 (Imperial, Modoc).

The CalFresh (Food Stamps) supplemental nutrition program served nearly 5.5 million Californians, including nearly 2 million children, in July 2024. Compared with 10 years earlier, CalFresh participation in 2024 was up 22% for Californians of all ages but down 16% for Californians ages 0 to 17.

In January 2020, 513,479 California families redeemed Women, Infants, and Children (WIC) program healthy food vouchers, down from 585,256 in 2019.
